

# 1212

## INFORMATION ABOUT THE PRODUCT

|                                          |                                      |
|------------------------------------------|--------------------------------------|
| Dimensions                               | 786 x 1293 cm                        |
| Impact area                              | 1121 x 1702 cm (135 m <sup>2</sup> ) |
| Overall height                           | 588 cm                               |
| Free fall height                         | 270 cm                               |
| Product compliant with EN 1176-1:2017-12 | YES                                  |
| Availability of spare parts              | YES                                  |

OCEAN BLUE

FRESH GREEN

Due to the height of the free fall of the product, the EN 1176-1:2017 norm allows following types of fall- absorbing surfaces:

| Material           | Description                                                                                    | Minimal layer thickness mm |
|--------------------|------------------------------------------------------------------------------------------------|----------------------------|
| Bark               | Shredded conifer bark, the size of pieces from 20 mm to 80 mm                                  | 300                        |
| Wood chips         | Mechanically fragmented wood without bark and leaves, size of the pieces between 5 mm to 30 mm | 300                        |
| Sand or gravel     | Particle size between 0,25mm to 8mm                                                            | 300                        |
| Synthetic material | Synthetic material with an approval for free fall heights ≥ 2700 mm                            |                            |

All types of surfaces need to be preserved by adding bulk material and removing extraneous matters. Broken glass is considered to be the most hazardous.
